First Office Action on the Merits

Information Disclosure Statement

1. The information disclosure statement filed June 8, 2005 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Specification

2. The disclosure is objected to because of the following informalities: the presence of illustrations in the descriptive portion of the specification (see MPEP § 608.01 (VI).

Appropriate correction is required.

Note: Drawings are requested in accordance with 37 CFR 1.81 and a "Brief Description of the Drawings" should be incorporated into the specification.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1617

The instant claims are indefinite for the following reasons:

(a) The recitation of “preferably” in claim 1 renders it indefinite because it is unclear whether the limitations following are part of the claimed invention. See MPEP § 2173.05(d).

(b) Claims 3 and 6 recite but do not identify said formula (III) or variables X, Y, Z, R, R’ and R’’.

(c) Claim 3 recites (i) “said aldehydes being **possibly** in the form of acetal” and (ii) said reaction being **possibly** carried out in the presence of strong mineral acids”. It is unclear what is intended by the use of the term “possibly”. Is the aldehyde in the form of an acetal? If not, what form is it in? Also, is the reaction in the presence of a strong acid? If not, what reagent(s) is involved in the process?

(d) Claim 4 recites “the strong mineral acid, **when present**, is hydrochloric acid”. As stated above in (c), if a strong mineral acid is not utilized in the process, what reagent(s) is utilized in the claimed process.

(e) Claims 2, 8-10, 12-14, 16-20, 22-24, 26-28, 30-32, 34 and 36 recite compounds having a number in parenthesis after each compound. It is unclear what is intended by said numbers.
